Central Oregon Summer COVID-19 Report
July 2023

COVID-19 July Surveillance Summary

Weekly # of reported COVID-19 tests and proportion of positive tests in Central Oregon, 2022-2023

Note: Reporting for COVID-19 cases has changed with the end of the federal public health emergency. Therefore, reporting individual positive cases of COVID-19 is no longer required in the U.S. The current COVID-19 report uses the NREVSS surveillance system described in the footnote.

The current COVID-19 report uses the NREVSS (National Respiratory & Enteric Virus Surveillance System), a laboratory-based system that monitors temporal & geographic circulation patterns based on the number of respiratory viruses occurring in a certain time/place for an array of respiratory viruses.

Note: MMWR morbidity & mortality weekly report (CDC) that cases of COVID-19 is no longer required in the U.S. The current COVID-19 report uses the NREVSS surveillance system described in the footnote.

MMWR = Morbidity & Mortality Weekly Report (CDC)

Data source for Central Oregon reporting is from the Oregon Public Health Division (OPHD). Reporting is based on age and week of report, with positive COVID-19 cases by week of collection.

Definitions: MMWR morbidity & mortality weekly report, MWR weeks, MMWR calendar week, Reporting period.

Notifiable Disease Surveillance System (NDSS) represents the week of the epidemiologic year for which the notifiable disease report is assigned by the MMWR weeks.

County residents to any ER across the state of Oregon. m/m not available. Note: Counts <19 will not be displayed to protect confidentiality.

This report is compiled by the Central Oregon Public Health Departments. Data are preliminary and might change as additional reports are received. Thank you for your local labs and clinics who provided data for this report. If your lab or clinic would like to submit influenza data, please reach out to flu@deschutes.org.
