DESCHUTES COUNTY PRIME CONTROL NETWORK

GENERAL:

The control network was started in June of 1988 by the Deschutes County Public Works Department for the evaluation of G.P.S. survey for the control of a county wide G.I.S project. This trial lasted one week with rented GPS receivers, 1 Trimble 4000 SL & 2 Trimble 4000 SX, and found be a more favorable way to obtain survey control over conventional survey procedures. Due to the need to complete the control project the Public Works Department purchased three Trimble 4000 ST Geodetic Surveyor receivers in October of 1990 and completed the GPS field work in June of 1991.

The Public Works Department turned the project over to the Deschutes County Surveyors Office in July of 1991 for the completion of additional field work, (remeasures, level loops, witness post, sketches, descriptions, etc.), and the office work on the evaluation of loop closures, adjustments, and final report.

MEASUREMENTS:

We used Trim 640 single baseline processor for the reduction of GPS measurements to produce fix solution base lines and holding to Trimble's guideline to high confidence limits for the ratio and rms criteria.

Level loops were run with a Wild Ni 2 level and standard rod. Most were 1 turn from bench to control point.

CLOSURES:

We ran numerous loop closures on the base lines to check for HI errors and isolation of bad lines for remeasure. In the most part loop closures were 0.5 to 1 ppm for lines from 40 to 80 km in length with 3 or more independent sessions. The computations of open end closures from one fix point to another fix point (high precision points) using all independent sessions with closures of 0.86 to 1.76 ppm.

ADJUSTMENT:

HORIZONTAL

A minimal constrained adjustment was accomplished by holding Pilot Butte fix with excellent result and many partial constrained adjustments using combinations of two to five fix points, all showing excellent internal consistency. One such adjustment holding Big Falls, Brothers, Prineville, Sisters and Wickiup fix and checking Pilot Butte (fiducial point) by 9 mm north and 9 mm east. For completion we added Pilot Butte to the system for the fully constrained adjustment of the network. Datum for all adjustments was nad 83 (1991) in latitude, longitude and ellipsoidal height.

ORTHOMETRIC

First we used NGS GEOID 90 program to compute geoid heights at each control point to make a geoid model of the control area. By fixing orthometric heights of three reliable points in a constrained adjustment, we can cause the geoid model transformation (deflection in latitude and longitude plus a height constant) onto the same orthometric datum. Here we can analyze the record elevation at our control points by using different combinations of fixed height to find errors in data entry, movement of bench marks and bad elevations. Of the 38 known orthometric elevations we held 35 fixed for ngvd 27, as they agreed within 20 mm of a constrained adjustment of 7 points held fix. The coordinate adjustment summary shows the points held fix, points not held fix for the NAVD 88 elevations are 38,44,51 & 72

DATUM DIFFERENCES:

NAD 83 is the readjustment and shift of existing control points from NAD 27 to NAD 83 (GRS 80). In 1991 the NGS completed the Oregon High Precision GPS Network and this data being labeled NAD 83-(1991). Then the NGS readjusted the old NAD 83 control points to NAD 83(1991),but this still reflects the poor internal consistency as compared to GPS survey measurements.

Due to the fact that we used GPS survey measurements, we could not use the NAD 83 (1991) values as fixed, so we established new values for the old points and called this datum NAD 83-91 GPS.

DESCRIPTION SHEET:

The description sheet shows information about each control station in the network, such as name, number, horizontal & vert.datum, ec cartesian, spc Oregon South, scale factor, convergence, general information and sketch.

NOTE: ALL VALUES ARE NAD 83 (1991) GPS

COUNTY COORDINATE SYSTEM:

The County Surveyors Office and the County GIS Section agreed on a conformal mapping projection for the best fit of the 80 % population area of Deschutes County, for a grid to ground distances, being no worse than 1 part in 50,000. This system is the best for the integration maps, deeds, etc., into the County GIS and should be of assistance to local surveyors. The County Surveyor in the process of establishing coordinates at section and 1/4 section corners on the Deschutes County Plane Coordinate System.

ACKNOWLEDGMENT:

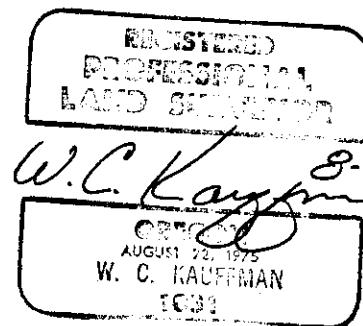

A county wide control project of this magnitude and complexity could not be accomplished with the help and cooperation of many people.

Commendations are due to Public Works Director, Larry Rice, for his foresight to know that a system of this kind is essential to the development of Deschutes County. Other Public Works personal who spent many long hours working in the hot days and cold nights: Scott Freshwaters, Roy Easter, Jack Smith and Pete Manley.

Mr. Lyle Riggers, Oregon Advisor, of the National Geodetic Survey deserves a special appreciation for his technical assistance and cooperation throughout the project.

A special recognition goes to the author-programmer of Trimnet-Plus, Mike Potterfield of Trimble Navigation, for the opportunity to beta test this very extraordinary gps survey adjustment program. Also his guidance and technical advice helped set the direction of this project.

A debt of gratitude to the Deschutes County Surveyor, Jeff Kern, for the support and patience in the long amount time it has taken to complete the Deschutes County Prime Control Network.

STATION RECOVERY (1971)

RECOVERED BY NATIONAL GEODETIC SURVEY 1971 (LDF)
STATION MARK, REFERENCE MARKS 1 AND 2 WERE RECOVERED AND FOUND IN
GOOD CONDITION. THE AZIMUTH MARK WAS SEARCHED FOR BUT WAS NOT
FOUND. A NEW AZIMUTH MARK WAS ESTABLISHED AT THIS TIME. A LONGER
DISTANCE WAS NOTED TO BOTH REFERENCE MARKS AND WAS CHECKED IN THE
FIELD.

STATION IS LOCATED ABOUT 14-1/2 MILES NORTHEAST OF SISTERS, 10
MILES NORTHWEST OF REDMOND AND 6-1/2 MILES NORTHWEST OF TERREBONNE

RM A IS A STANDARD DISK, STAMPED BIG FALLS 1945 RM A 1971, CEMENTED IN A DRILL HOLE IN AN OUTCROP WHICH PROJECTS ABOUT 2 INCHES ABOVE THE GROUND SURFACE. IT IS ON THE HIGHEST PART OF THE HILL AND ABOUT 149 FEET SOUTHWEST OF THE TREE AND ABOUT 2 FEET LOWER THAN THE STATION.

AZIMUTH MARK IS A STANDARD DISK, STAMPED BIG FALLS 1945 1971, CEMENTED IN A DRILL HOLE IN AN OUTCROP WHICH PROJECTS ABOUT 6 INCHES ABOVE THE GROUND SURFACE ON THE NORTH AND IS FLUSH ON THE SOUTH. IT IS ON THE EAST END OF THE RIDGE AND 16.6 FEET NORTH OF A METAL WITNESS POST.

THE DISTANCE BETWEEN REFERENCE MARK 1 AND 2 IS 31.05 FEET OR 9.465 M.

THE STATION IS IN THE NORTHEAST 1/4 OF SECTION 4, T 14 S, R 12 E.
HEIGHT OF LIGHT ABOVE STATION MARK 33 FEET.

AIRLINE DISTANCE AND DIRECTION FROM NEAREST TOWN
6-1/2 MILES NORTHWEST OF TERREBONNE.

STATION RECOVERY (1974)

RECOVERED BY NATIONAL GEODETIC SURVEY 1974 (JDS)
THE STATION MARK, REFERENCE MARKS 1, 2, BIG FALLS 1945 RM A 1971 AND THE AZIMUTH MARK WERE RECOVERED IN GOOD CONDITION AS DESCRIBED IN 1971 BY L. D. FAIR. THE TO REACH IS ADEQUATE AND THE PROPERTY OWNER IS THE SAME, MR. DONALD WILLIAMS WHO LIVES ENROUTE TO THE STATION.

THE DIRECTIONS TO ALL MARKS CHECKED THE 1971 DATA WITH THE EXCEPTION OF REFERENCE MARK 1 WHICH WAS LOCATED TOO CLOSE TO STATION TO FOCUS ON CLEARLY WITH THE INSTRUMENT. THE DISTANCE TO REFERENCE MARK 1 AND REFERENCE MARK A CHECKED THE 1971 DATA. THE DISTANCE TO REFERENCE MARK 2 WAS SHORTER BY 0.05 FOOT OR 0.014 METERS ALTHOUGH THIS DISTANCE CHECKS THE 1945 DATA.

THIS STATION WAS USED AS GEOCEIVER STATION 51066, FOR SATELLITE OBSERVATION.

HEIGHT OF LIGHT ABOVE STATION MARK 4.27 FEET.

AIRLINE DISTANCE AND DIRECTION FROM NEAREST TOWN
6.5 MILES NORTHWEST OF TERREBONNE.

STATION RECOVERY (1976)

RECOVERED BY NATIONAL GEODETIC SURVEY 1976 (CLN)
THE STATION MARK, BOTH REFERENCE MARKS, AND THE AZIMUTH MARK ESTABLISHED IN 1971 WERE RECOVERED IN GOOD CONDITION. THE RECOVERY NOTE SUBMITTED BY L.D.F. IS CORRECT, AND ADEQUATE.
