Noxious Weed Coloring Book

NO INVASIVE PLANTS!

Provided by the Deschutes County Noxious Weed Board

Bend, Oregon

Let's Get Noxious Weeds on the Run!

A weed is any plant growing where it is not wanted. A noxious weed is a plant (growing on the land or in the water)

that spreads quickly and can cause big problems for the environment. These plants are **non-native invaders**, meaning they have been brought in by humans (either intentionally or by accident) from other areas.

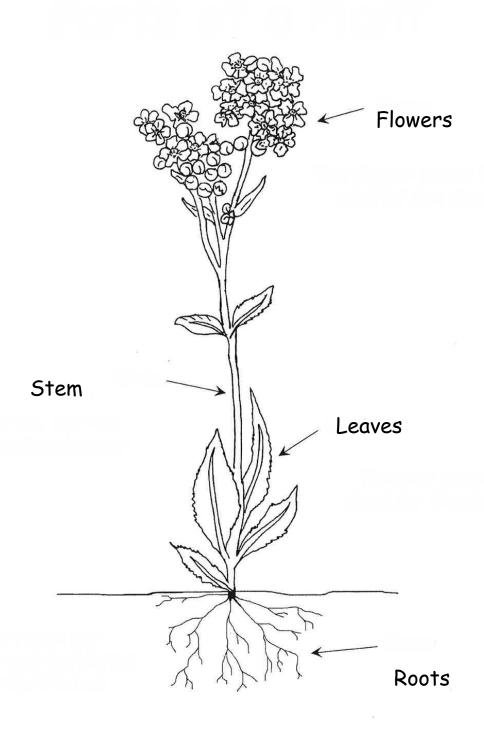

Noxious weeds invade our towns, farms, and forests and force out the **native plants** that animals and people need for food and shelter

See a noxious weed? Yank it up!

Noxious weed images for this guide were obtained from the *Noxious Weed Coloring Book*, created by the Salt Lake County Weed Control Program. Knappy icon courtesy of Cheryl Howard and the Let's Pull Together event.

Parts of a Plant

Spotted Knapweed

Public Enemy Number One!

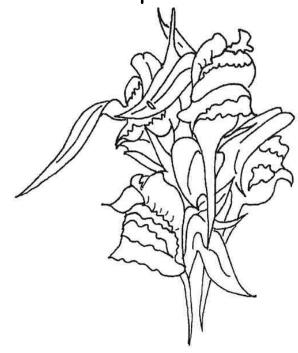

This is the most common noxious weed in Deschutes County. You will find it growing along roads, in forest areas, empty lots, and in fields and pastures.

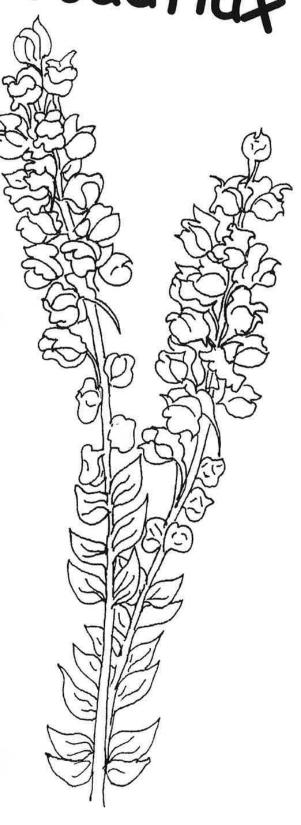

Want to help get rid of this pest? Put on some garden gloves and just pull this bad guy right up out of the ground.

Dalmation Toadflax

Pretty but Invasive

Don't be fooled by the bright yellow flowers of this noxious weed. This plant has escaped from its garden home and likes to take over open areas.

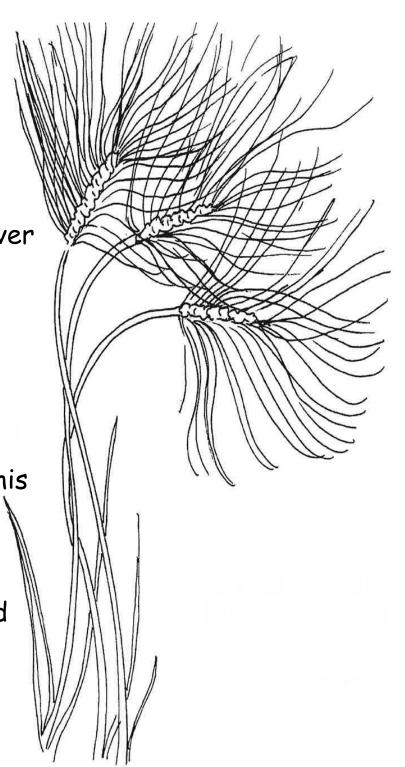

Medusahead

Highly Invasive!

This grass will take over areas so that native grasses and flowers cannot grow.

The sharp seeds of this plant can injure the mouths and eyes of wildlife, livestock, and pets.

Houndstongue

Sticks Like Velcro!

The seeds of this noxious weed have curved hooks that allow the seeds to stick to fur (livestock, wildlife and pets), and to clothing.

This plant can be poisonous to cows and horses.

Canada Thistle

OUCH! The dark, green leaves of this plant is covered in sharp spines. It grows 3 to 4 feet tall and has light purple flowers.
